DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 1-3 and 7-10 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

3. Claims 1-3 and 7-10 are drawn to a "program" *per se* as recited in the preamble (*computer-readable medium may comprise computer storage media and communication media, wherein the computer storage media may further comprise any other media. The communication media and "any other media" are non-statutory subject matters*) and as such is non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in computer readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware

components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Such claimed computer programs do not define any structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized.

Allowable Subject Matter

4. Claims 11-13 and 20-25 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Dragosh et al. (US 6366886). Dragosh et al. disclose a method for speech recognition in a client/server network, the method comprising: receiving data over a wide area network indicative of input speech together with an indication of a grammar (*col 5, lines 29-60*) to be used with the data indicative of input to perform recognition (*col. 4, line 30 to col. 5, line 67*); processing the data using the grammar with a recognizer to obtain recognition results (*col. 6, lines 54-67*).

Dragosh et al. fail to specifically disclose the steps of sending the recognition results for the data indicative of the input to a remote location on the network; receiving from the remote location data indicative of a prompt for the user to be used when the recognition results are indicative of no recognition of the input from the client; converting the data indicative of the prompt to speech data when the recognition results are indicative of no recognition of the input from the client; and sending the speech data to the client device

over the wide area network. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Dragosh et al. in order to obtain the claimed invention. Therefore, claims 11-13 and 20-25 are allowed over prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
